

Did you know?

...there is a new, easy and quick tool to screen both axial and peripheral arthritis in patients with IBD?¹

Stella, results from your screening questionnaire revealed that even if you had swollen and painful feet, this is not enough to detect signs of axial or peripheral arthritis.¹ In fact, according to this new screening tool, at least 3 positive questions will help us to recognize possible symptoms of spondyloarthritis in patients with IBD.¹

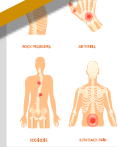

Questions were very easy to understand and it took me only 5 minutes to complete it.¹

Yes Doctor F, this IBIS-Q could be very helpful, since the diagnosis of SpA in IBD remains challenging outside a combined assessment.¹

IBD

IBD + SpA

IBD: Inflammatory bowel disease; IBIS-Q: IBD Identification of Spondyloarthritis Questionnaire; SpA: Spondyloarthritis;
